

# Introducing SOLARE X

A UNIVERSAL composite with excellent handling, beautiful aesthetics and great simplicity

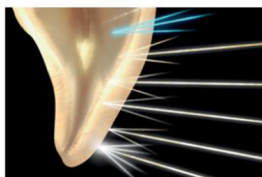

## SOLARE X gives predictable aesthetic invisibility

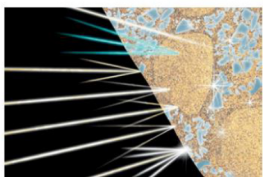

Restorations placed using SOLARE X achieve predictable aesthetic invisibility through a remarkable chameleon effect. Majority of restorations can be completed using a single shade.

The intelligent use of diverse filler technologies within SOLARE X means exceptional aesthetic outcomes can be achieved through a simplified shade system.

Light movement through natural teeth is highly diverse due to the complex multifaceted structures within teeth.

To replicate the aesthetic properties of natural teeth SOLARE X contains nano fillers, glass fillers and pre-polymerised fillers that imitate the complex light transmission, diffusion and reflection characteristics found in natural teeth.

## Excellent handling

### Optimal adaptation

SOLARE X has just the right amount of flow under pressure, ensuring intimate contact with the cavity walls and floor, for the best possible adhesive interface and marginal adaptation.

### Total control

SOLARE X is easy to manipulate and can even be brush contoured. It won't stick or slump or set up prematurely under the overhead light, giving total control to the clinician.

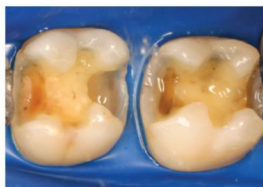

### Self-correcting surface

Free-hand contouring is made easier with a remarkable self-correcting feature where small surface voids and imperfections simply vanish leaving a smooth and naturally contoured surface.

## Simple and easy to use

SOLARE X is designed with the clinician foremost in mind. A strong, radiopaque anterior/posterior composite with exceptional beauty, yet shade selection is remarkably simple. With an optimal combination of handling and finishing characteristics, placement time is minimised and the final high quality restorations are achieved with ease.

## A simplified shade range

SOLARE X provides you with 4 core shades to cover all your single shade restorative needs. SOLARE X makes it easier and quicker to achieve natural-looking and long-lasting restorations.\*

### SOLARE X (Anterior/Posterior)

Standard: X-A1, X-A2, X-A3, X-A3.5

Available in: 3.7 gram (2ml) syringes

With GC SOLARE X, all composite restorations are placed easily with just one UNIVERSAL restorative. It is aesthetically pleasing for ANTERIOR use and has excellent physical properties for POSTERIOR use.

- Remarkable ability to blend into the tooth
- Non-sticky handling that allows for easy manipulation
- Plenty of working time under the operator light
- Easy and quick to polish for a smooth, glossy surface
- Low shrinkage stress<sup>†</sup>
- High fracture toughness<sup>†</sup>
