THE CURING LIGHT
REIMAGINED

The VALO X dental curing light is the ultimate in LED curing light technology. Featuring a larger 12.5 mm lens aperture, long-lasting custom LEDs, and optimized power output, you will be able to uniformly cure all light-cured dental materials within an even larger curing area. Its 12 LEDs (8 curing and 4 white lights) provide excellent curing depth and beam collimation with better thermal management and LED durability, so you can be confident in your cure.

ECLIPSING THE COMPETITION

The VALO Grand curing light features everything you've come to love from the VALO curing light family, but with a larger lens. The 12 mm lens is designed to easily cover a 10 mm molar for quick and effective curing. The power button on the underside allows for more intuitive operation.

The VALO Grand light uses a custom, multiwavelength light-emitting diode (LED) for producing high-intensity light at 385-515 nm capable of polymerizing all light-cured dental materials. This intensity will also penetrate porcelain and is capable of curing underlying resin cements similar to a quality halogen light.

GREAT PRODUCTS, EXCITING SAVINGS

15% OFF

Ultradent™ Porcelain Etch and Silane Etchants

Ultradent Porcelain Etch is a buffered, 9% hydrofluoric acid and is ideal for intraoral and extraoral porcelain etching. It offers high visibility and is viscous enough to stay where it's placed. For the best bond strengths, follow porcelain etching with an application of Ultradent Silane, a single-component coupling agent.

20% OFF

UltraCal™ XS

30%–35% Calcium Hydroxide Paste

UltraCal XS paste elevates the dentin pH to alkaline, making it the ideal medium to be used as an interappointment dressing in clinical situations involving root resorption, dressing material, pulp capping, apexification and perforations.

20% OFF

Jiffy™ Spin

Shaping and Finishing Disks

The Jiffy Spin shaping and finishing disk system finishes high-quality restorations. The ultra-thin disks are perfect for interproximal finishing and shaping. Aluminium oxide coated disks range from coarse to fine for smoothing and polishing, plus a diamond grit extra-coarse disk for rapid shaping and gross removal.

Protective Loupe Inserts

WORK WITH YOUR LOUPES,
UNINTERRUPTED

**25%
OFF!**

You don't need to hold protective glasses in front of your loupes anymore. Ease-In-Shields protective inserts easily slide behind your loupes and fit close to the eyes to provide comfortable, hands-free eye protection. They are available in a variety of options for different laser wavelengths and curing lights.
